

Tiny Size, Bi-direction Voltage-Level Translator with 2:1 Switch

Features

- Single 1.6V to 5.5V Supply Voltage
- Enable and High Voltage Supply from VCCEN
- Low Voltage Decided by Internal LDO, down to 0.9V
- Supports 10MHz Open-Drain Operation without external pull up resistor
- I2C Requirements for Standard, Fast, and High Speeds
- Low Transmission Gate Ron: 20Ω
- Pullup Resistor Enabled for High Voltage Side
- Single Pole Dual Throw Switch
- 1.3uA Supply Current
Tiny 0.9mm x 1.1mm 6-pin DFN
or 2.07mm x 2.30mm 6-pin SC70

Applications

- I2C, SMBus, PMBus, MDIO, UART, low-speed SDIO, GPIO, and other two-signal interfaces

General Description

The YHM4201/4203 is a bidirectional voltage-level translator with single pole dual throw switch, designed specifically for low power consumption making it suitable for portable and battery powered equipment. Externally applied voltages, VH and VL, set the logic levels on either side of the device. A logic signal present on the VL side of the device appears as the same logic signal on the VH side of the device, and vice-versa.

The device is operational from 0.9V to 3.3V VL and 1.6V to 5.5V VH, with only two VCCEN pin which is tied to VH for enable and internal LDO input. The VL is decided by internal LDO output, which can be used for 0.9/1.2V/1.8V/2.5V/3V/3.3V IO by different device version A/B/C/D/E. When VCCEN is low, the translator switch is off, and a high-impedance state exists between ports.

The single pole dual throw switch is controlled by VCCEN1 and VCCEN2. When VCCEN1 is high, channel 1 is turn on with level shift. When VCCEN2 is high, channel 2 is turn on with level shift.

The Device also integrate one shot block to reduce the rise time for high speed application.

The YHM4201/4203 comes in a 6 PIN, 0.4mm Pitch, 0.9mmx1.1mm DFN-6 package or a 6 PIN, 2.07mm x 2.30mm SC70-6 package.

YHM4201 DFN Pin Descriptions

DFN	Name	Description
1	GND	Ground.
2	VCCEN1	Power Supply and Enable 1. Connect to VH GPIO. Bypass a 0.1uF capacitor. If it is high, IOVL1 to IOVH switch with level shift will be turn on. Do not leave this pin floating.
3	IOVH	Input/Output. Reference to VH.
4	IOVL2	Input/Output 2. Reference to VL.
5	IOVL1	Input/Output 1. Reference to VL.
6	VCCEN2	Power Supply and Enable 2. Connect to VH GPIO. Bypass a 0.1uF capacitor. If it is high, IOVL2 to IOVH switch with level shift will be turn on. Do not leave this pin floating.
